

INTRODUCING THE

OASYSTM PUMP

AT LONG LAST, WE ARE NO LONGER LIMITED TO -25' SUCTION LIFT!

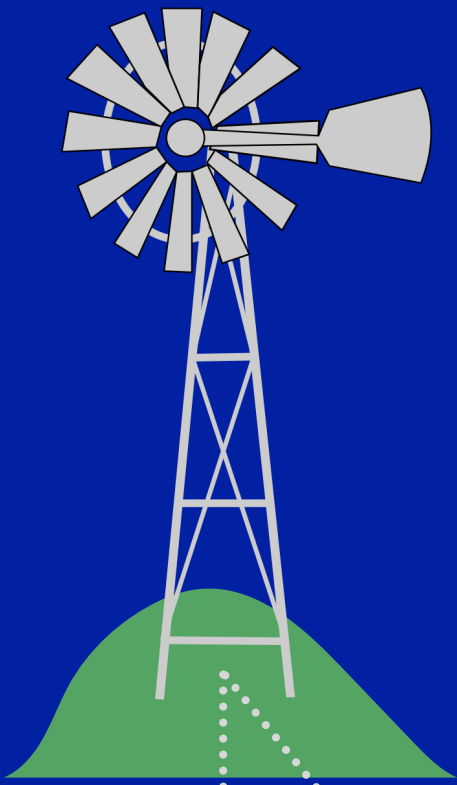

(normally limited by atmospheric pressure)

Introducing the amazing Oasys Pump. A remote, deep well pressure pump, new and exclusive to Horizon Windmills.

Refined over the past 11 years; the first Oasys pump was made in 2020. It's beautifully simple and reliable. It can pump your precious water up from the most difficult situations like magic.

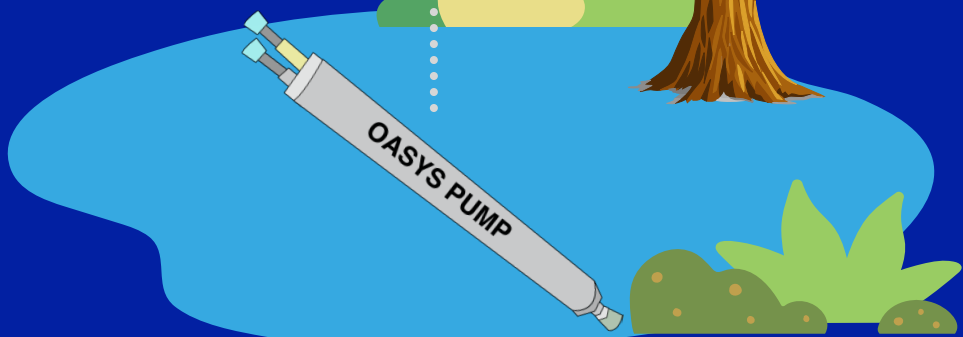

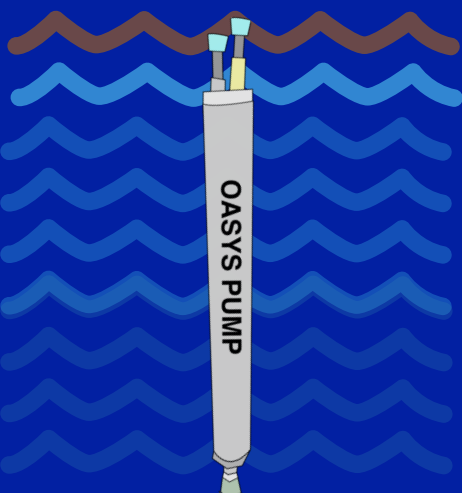

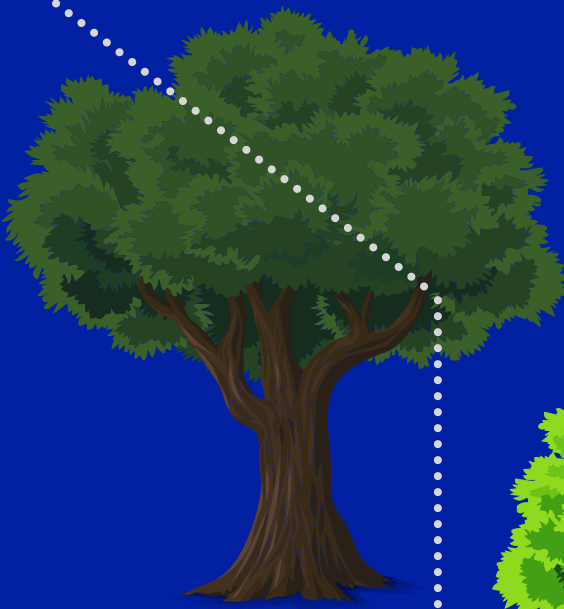

The problems of suction are gone forever. Two pumps work together in synergy and under reliable pressure (ONLY pressure, no suction). The windmill drives the primary pump, which sends a water pressure signal to activate the Oasys Pump down the well or hillside. 2x20mm ID pipes connect the two pumps. One for the signal, and another to send water back to your tank.

The design isn't just simple, it's foolproof.

25'  Suction limit before 2020

up to 55m +  Suction limit with Oasys

- Deep Well
- Underground Aquifer

- Pond
- River
- Spring
- Creek
